

# Yuan Jiang (Allen)

Houston, TX | 1-412-932-0410 | [allen.jiang.jobs@gmail.com](mailto:allen.jiang.jobs@gmail.com) | [www.linkedin.com/in/allen-yuan-jiang](https://www.linkedin.com/in/allen-yuan-jiang) | [github.com/aijiang35](https://github.com/aijiang35) | <https://aijiang-portfolio.vercel.app/>

## Summary

Full Stack Developer experienced in building user-facing products with React, React Native, Python FastAPI, ASP.NET Core, Java and AWS. Delivers scalable microservices, REST APIs, and reliable workflows across travel, retail, enterprise web, and AI-enabled collaboration products, with a focus on maintainable code and measurable improvements to performance, usability, and operational efficiency.

## Recent Experiences

### EOG Resources Sep 2025 - Present

#### *Full Stack Developer, Livestream & Jarvis, Houston, TX*

- Led full-stack development of the Livestream Platform, an internal Twitter clone for oil rig field operations, using React, Python FastAPI, and AWS with AI-assisted development through Cursor AI, delivering 30+ features that enhanced cross-team communication.
- Designed and implemented workflows for Jarvis, EOG's native AI, featuring automated entity recognition and tag assignment that categorized 3,800+ corporate individuals and teams with minimal manual intervention.
- Designed a scalable MongoDB schema for bookmark group collections, allowing unlimited bookmarks while reducing feed load times by 250ms for more than 10,000 concurrent collaborative users.
- Designed and deployed a local storage snapshot system that autosaves unsubmitted content edits every 15 seconds, ensuring zero data loss across network disruptions, accidental reloads, and application closures.
- Engineered a multi-tiered notification system managing seven overlapping priority types, reducing message latency by 2.5 seconds and cutting average user response times to under four minutes.
- Developed an interactive, high-density user profile card that aggregates personal details through GraphQL and React Query, saving users an average of four clicks per profile navigation.
- Overhauled the feed post component by implementing a responsive header, redesigned attachment cards, a switchable audio player, a highly customized footer, and an expanded "More Options" utility menu, generating an additional 1,200 daily user interactions.
- Introduced a granular, restricted post-type feature for secure private messaging, ensuring data privacy compliance and securing sensitive communications for 50+ executive and leadership teams.
- Architected a multi-feed bulk selection feature that reduced average query preparation time from 18 seconds to 5 seconds, resulting in 2,400+ additional multi-post AI queries monthly.
- Introduced direct appending from drafts and emails, streamlining the user workflow for long-form updates and saving content creators an average of 50 seconds per document.

### United Airlines (UA) Feb 2024 - Aug 2025

#### *Full Stack Developer, UA Mobile App Project, Houston, TX*

- Led development of the UA Mobile App's core Travel-Ready Center and Document Scanning modules as microservices using React, React Native, Kotlin, Swift, Python FastAPI, Java, ASP.NET Core, and AWS, streamlining more than 5 million transactions per month for over 500,000 monthly users.
- Migrated and redesigned 40+ RESTful API methods from 15+ legacy repositories to modern equivalents, increasing API call speed by 30%, reducing logging noise by 40%, and shortening check-in time by 15 seconds.
- Established Spanish caption database across 17 features across both modules, localizing 470+ captions in 20+ locales.
- Streamlined data validation for documents across diverse global destinations and special passenger types, reducing manual intervention by 1,500 per month, document mismatches by 3,600 per month, and average check-in time by five seconds.
- Developed Onward Ticket Attestation feature with dynamic status updates for various scenarios, reducing manual verifications by 90% and average passenger check-in time by 20s.

### Dick's Sporting Goods, Inc. (DSG) Sep 2022 - Dec 2023

#### *Full Stack Developer, POS Endzone (EZ) Project, Pittsburgh, PA*

- Led development of 30+ full-stack Point-Of-Sale features as modular microservices using React, React Native, Python Fast API, ASP .NET Core and AWS, boosting cashier efficiency by 20% across 2.6k+ registers in 700+ stores, processing \$2.45B annually, while preventing \$5M+ potential loss due to system outages.
- Continuously strengthened core OmniSearch functionality by merging multiple search modules, reducing average account lookup time by 12s, item return time by 45s, and average checkout time by 11s.
- Overhauled module for Gift Card purchasing and fixed 3 critical behavioral bugs, reducing transaction failures by 15%, increasing 50k+ monthly gift card sales, flagging 30+ fraudulent gift card purchases overall.

- Streamlined Item Rapid Scan behavior for age-restricted items, reducing said item checkout time by 31s.
- Discovered and patched a critical info leak in Loyalty Account signup affecting 750k+ accounts, increasing account signup rate by 15%, preventing \$2.5M+ potential brand damage.
- Achieved 95%+ test coverage of automated E2E tests in Cypress, enhanced logging and alerting in Kibana, reducing weekly cashier feedback by 40%.
- Mentored 2 junior engineers, contributed to 100+ design and code reviews, authored 35+ wiki articles about best practices in developing, troubleshooting and testing.

## **Skills**

**Languages:** JavaScript, TypeScript, Python, C#, Java, C++, Go (GoLang), Rust, Kotlin, Swift, SQL, R

**Frontend:** React, Material UI, Tailwind CSS, React Native, Angular, Vue.js, Svelte, Next.js, HTML/CSS

**Backend:** Fast API, ASP.NET Core, Node.js, Express.js, Spring Boot, Hibernate, Django, Flask, Full-Stack Development, API Development, AI-Assisted Development, Data Validation

**Databases:** MongoDB, PostgreSQL, MySQL, Microsoft SQL Server, Oracle DB, Cassandra, Redis

**Cloud:** Docker, Kubernetes, Amazon Web Services (AWS), Microsoft Azure DevOps, Google Cloud Platform (GCP), Terraform, IaaS, PaaS, SaaS

**CI/CD:** Git, Github, GitHub Actions, Jenkins

**Testing:** Cypress, Playwright, Swagger, Swashbuckle, JUnit, Jest, Mocha, JMeter, Postman, HTTP Toolkit, Fiddler

**Monitoring:** ELK Stack (Elasticsearch, Logstash, Kibana), Datadog, Prometheus, Grafana, New Relic

**Distributed Systems:** RabbitMQ, Apache Spark, Apache Kafka, AWS Lambda

**Teamwork:** Monday, Agile, Scrum, Jira, Confluence, Kanban, Microsoft Teams, Slack

## **Certifications**

- AWS Certified Cloud Practitioner
- AWS Certified Solutions Architect – Associate

## **Education**

**Carnegie Mellon University, Sep 2020 - May 2021**

*Master of Science, Mechanical Engineering*

**Carnegie Mellon University, Sep 2016 - May 2020**

*Bachelor of Science, Mechanical Engineering*
